Foot Defender - Protective Boot (HCPCS - L4361) (Indicate Size)

☐ Small (Men's 5-7 Women's 7-9) ☐ Medium (Men's 7.5-9.5 Women's 9.5-11.5) ☐ Large (Men's 10-13 Women's 12-14)

ICD-10 Code: _____ (Primary Ortho Diagnosis when Foot Defender Boot is Ordered)

PHYSICIAN APPROVAL: I certify that I am treating the patient named above and am ordering these supplies based on my exam and treatment of the patient. I affirm the supplies are medically reasonable and necessary. Patient confirms that they are not already on Hospice or Home health care services. The physician's progress note documents the medical necessity to dispense these wound care supplies consistent with the size, depth, and drainage noted. Complete instructions to perform dressing changes were provided to patient and/or caregiver. Pt. was advised that they may either rent or purchase inexpensive durable medical equipment elsewhere. All products dispensed were sterile. Duration of treatment will be 90 days unless specified.

Impression and Plan

Wound Management: Plan: The patient is seen in follow-up. He has multiple wounds on both thighs due to calciphylaxis. His wounds are improving. We are taking a very conservative approach regarding aggressive debridements and a more aggressive approach regarding his dressing changes. He is doing a great job with his dressing changes. Plan is to see him again in 2 weeks. He will call in the meantime if there is any significant change. More than 45 minutes was spent evaluating the patient, reviewing his chart and discussing ongoing treatment recommendations..

Impression and Plan

Wound Management: Plan: Patient is seen in follow-up. He continues to have multiple wounds most likely due to calciophylaxis. Some are improved. They are tender but for the most part they do not have necrotic tissue and the majority shows pink granulating tissue. Debridement does not appear indicated. I do think he would benefit by adding collagen powder and blastx. We will order this for him. Continue with the dressing changes. Plan for follow-up in 1 week. More than 45 minutes was spent evaluating patient, reviewing his chart and making ongoing treatment recommendations..
